Where Surface Meets Innovation

Breton Technology & Facility

breton

TECH & FACILITY

Breton developed and patented a manufacturing process in the 1960s to create engineered stone slabs, also called quartz surfaces, under the brand Bretonstone. Combining crushed stone with polymeric resins, then compacting it under vacuum and vibration to create slabs that mimic natural stone — only stronger and more uniform.

Machines & Lines

Breton invents, designs and builds specific high tech and high production machining centers, lines and stand-alone machines for processing materials (natural stone, marble, granite, quartz, ceramic, heavy clay, engineered stone, resins and foams, polymers, and metals) and for additive manufacturing.

Plants

Since 1963, Breton offers a wide range of patented solutions for the industrial production of Engineered Stone slabs and blocks, destined for several markets and applications: from the world of countertops and interior design to construction and many others.

Software

Breton offers software suites and production process management platforms, integrable with legacy systems as necessary, to optimize machine operation and assure full technological control of plants.

Technologies

Breton proposes technological solutions applicable to various sectors to maximize the performance of Breton machines and achieve previously unimaginable levels of precision and production rates.

Crema Stone

Crema Stone is inspired by the organic flow of nature. Reflecting the warm atmosphere of the desert and the beauty of sand dunes, Crema Stone exudes a unique allure, as if it were a piece of natural stone.

The thick veins, harmonized with base in tone-on-tone colors, are designed irregularly, reminiscent of the ridges of sand dunes.

Delicate patterns, scattered like sand around the thick veins, add a touch of softness. The finely dispersed thin veins add richness and depth across the entire surface.

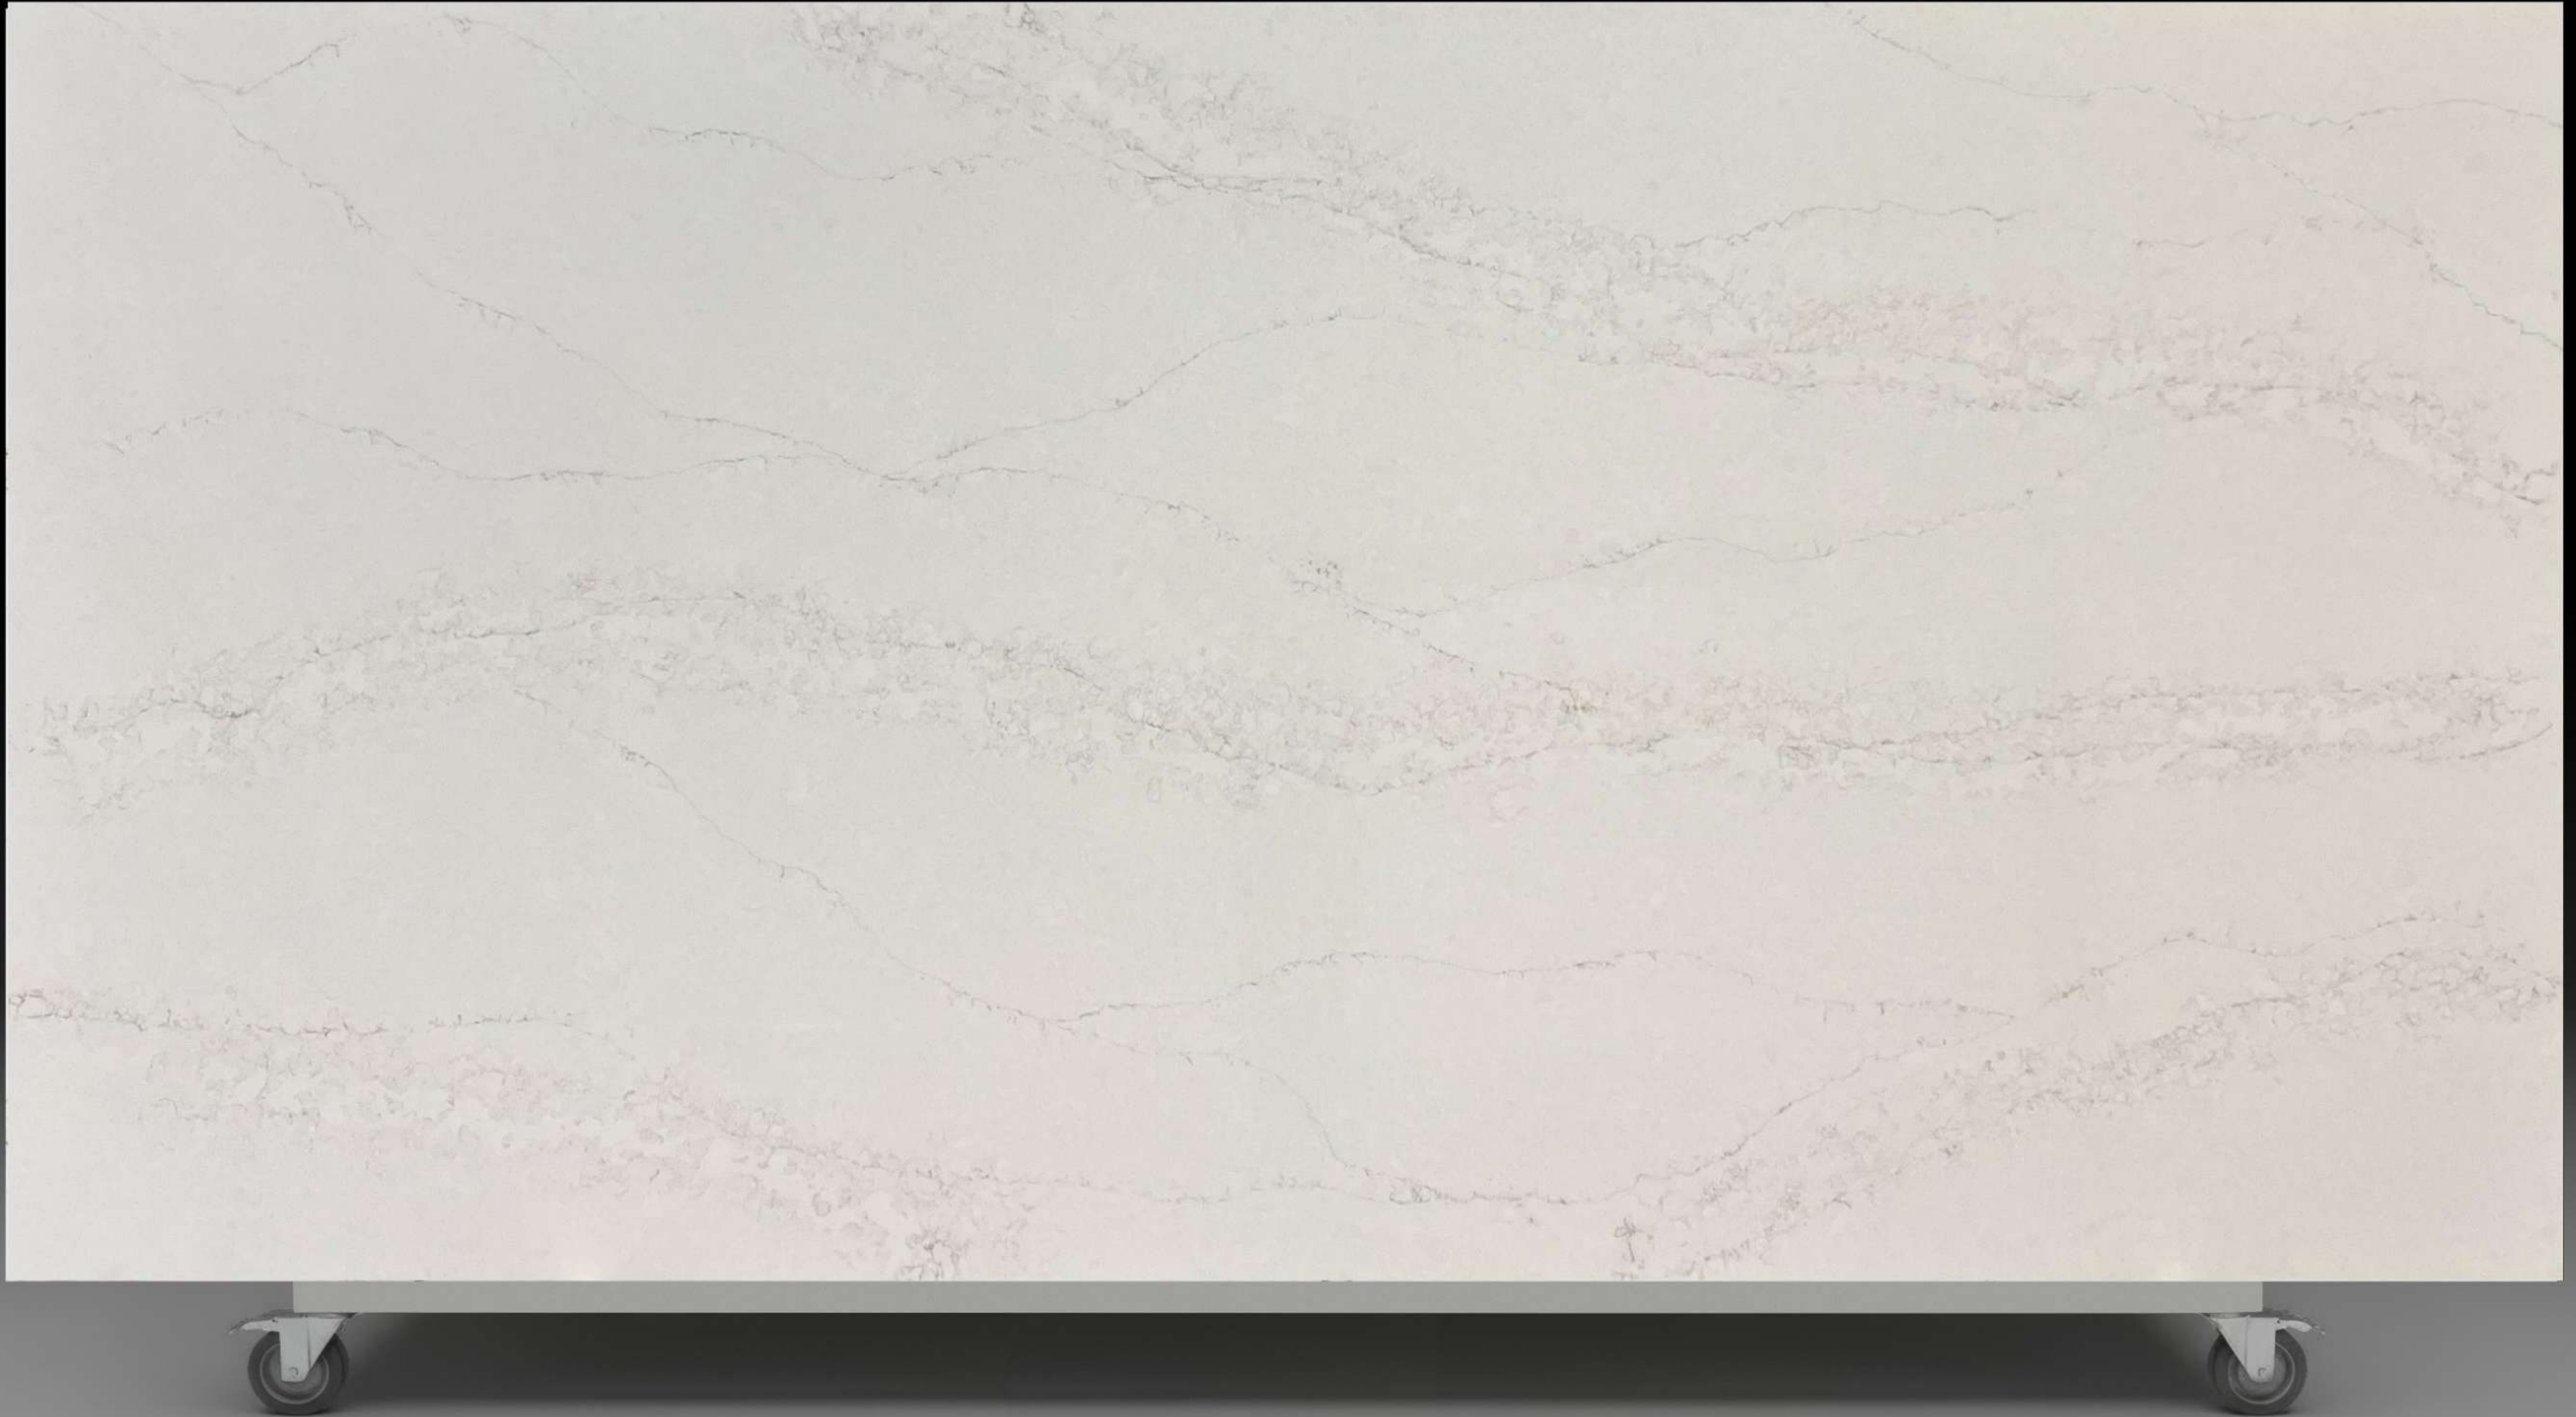

Low-Silica Content

Crema Stone

SLAB SIZE 65" × 130" (58.68 sq.ft)
THICKNESS 2CM & 3CM **FINISH** POLISHED

Low Silica

Crema Stone

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

THICKNESS 2CM & 3CM **FINISH** POLISHED

Crema Stone

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

London Mist

London Mist is a product that beautifully fills the entire surface with cloud-like short veins and delicate thin veins, without the presence of any thick veins.

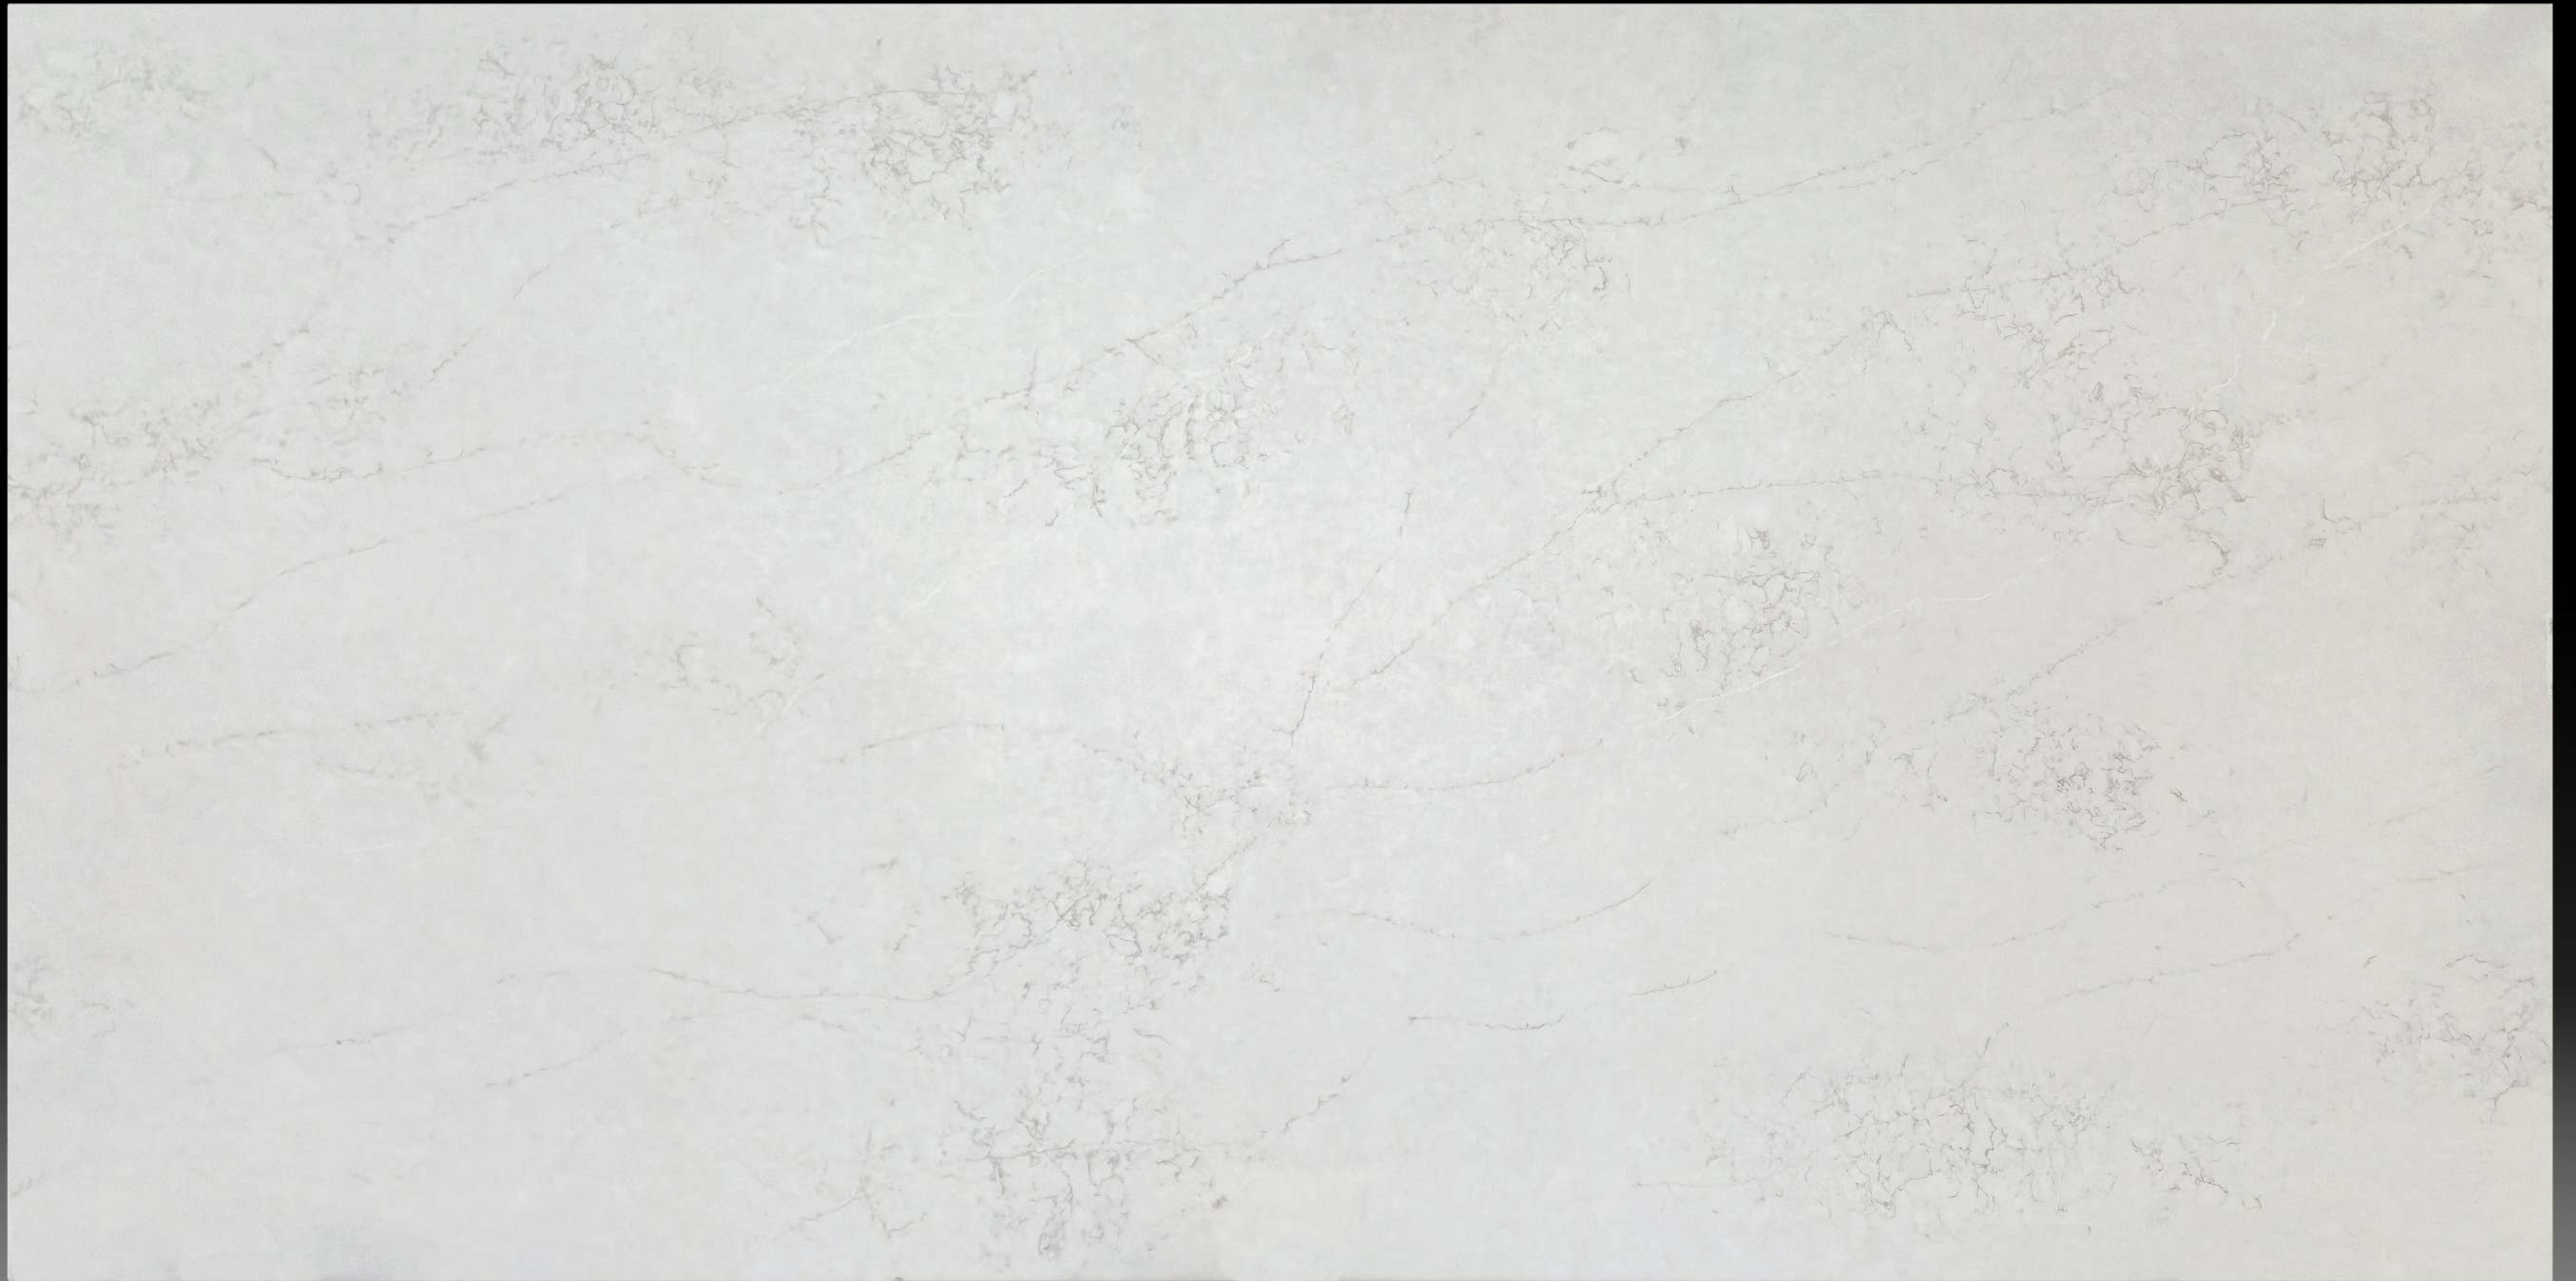

The evenly distributed short veins add depth to the base, while two contrasting colors of thin veins-white and grey-are harmoniously interwoven, creating a balanced and rhythmic composition across the slab.

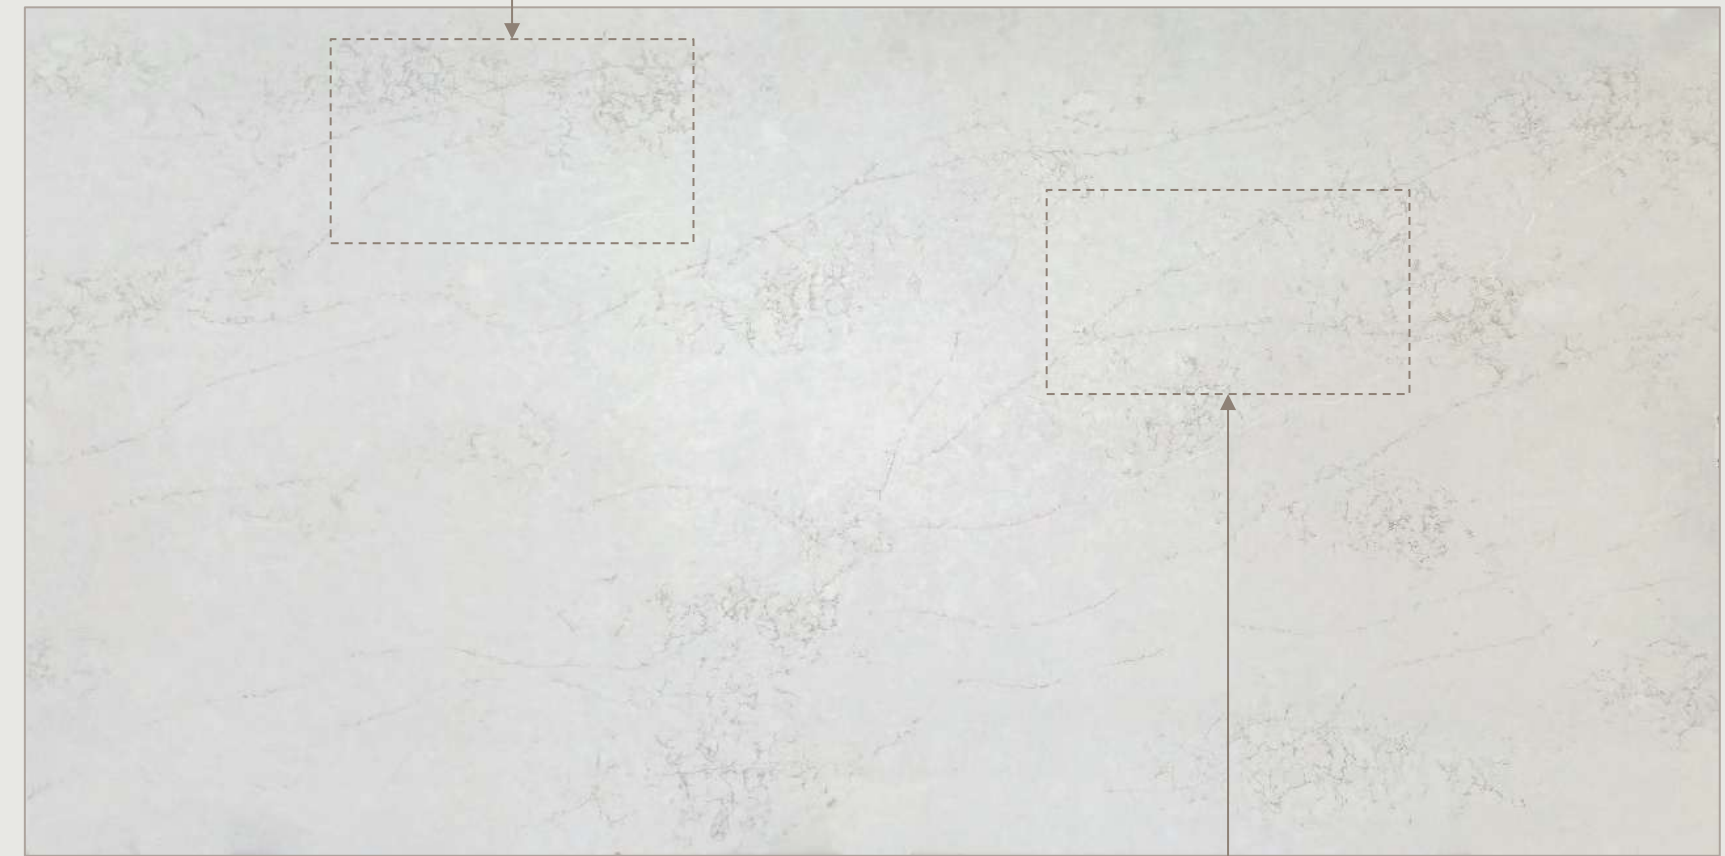

London Mist

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

London Mist

SLAB SIZE 65" x 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

London Mist

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

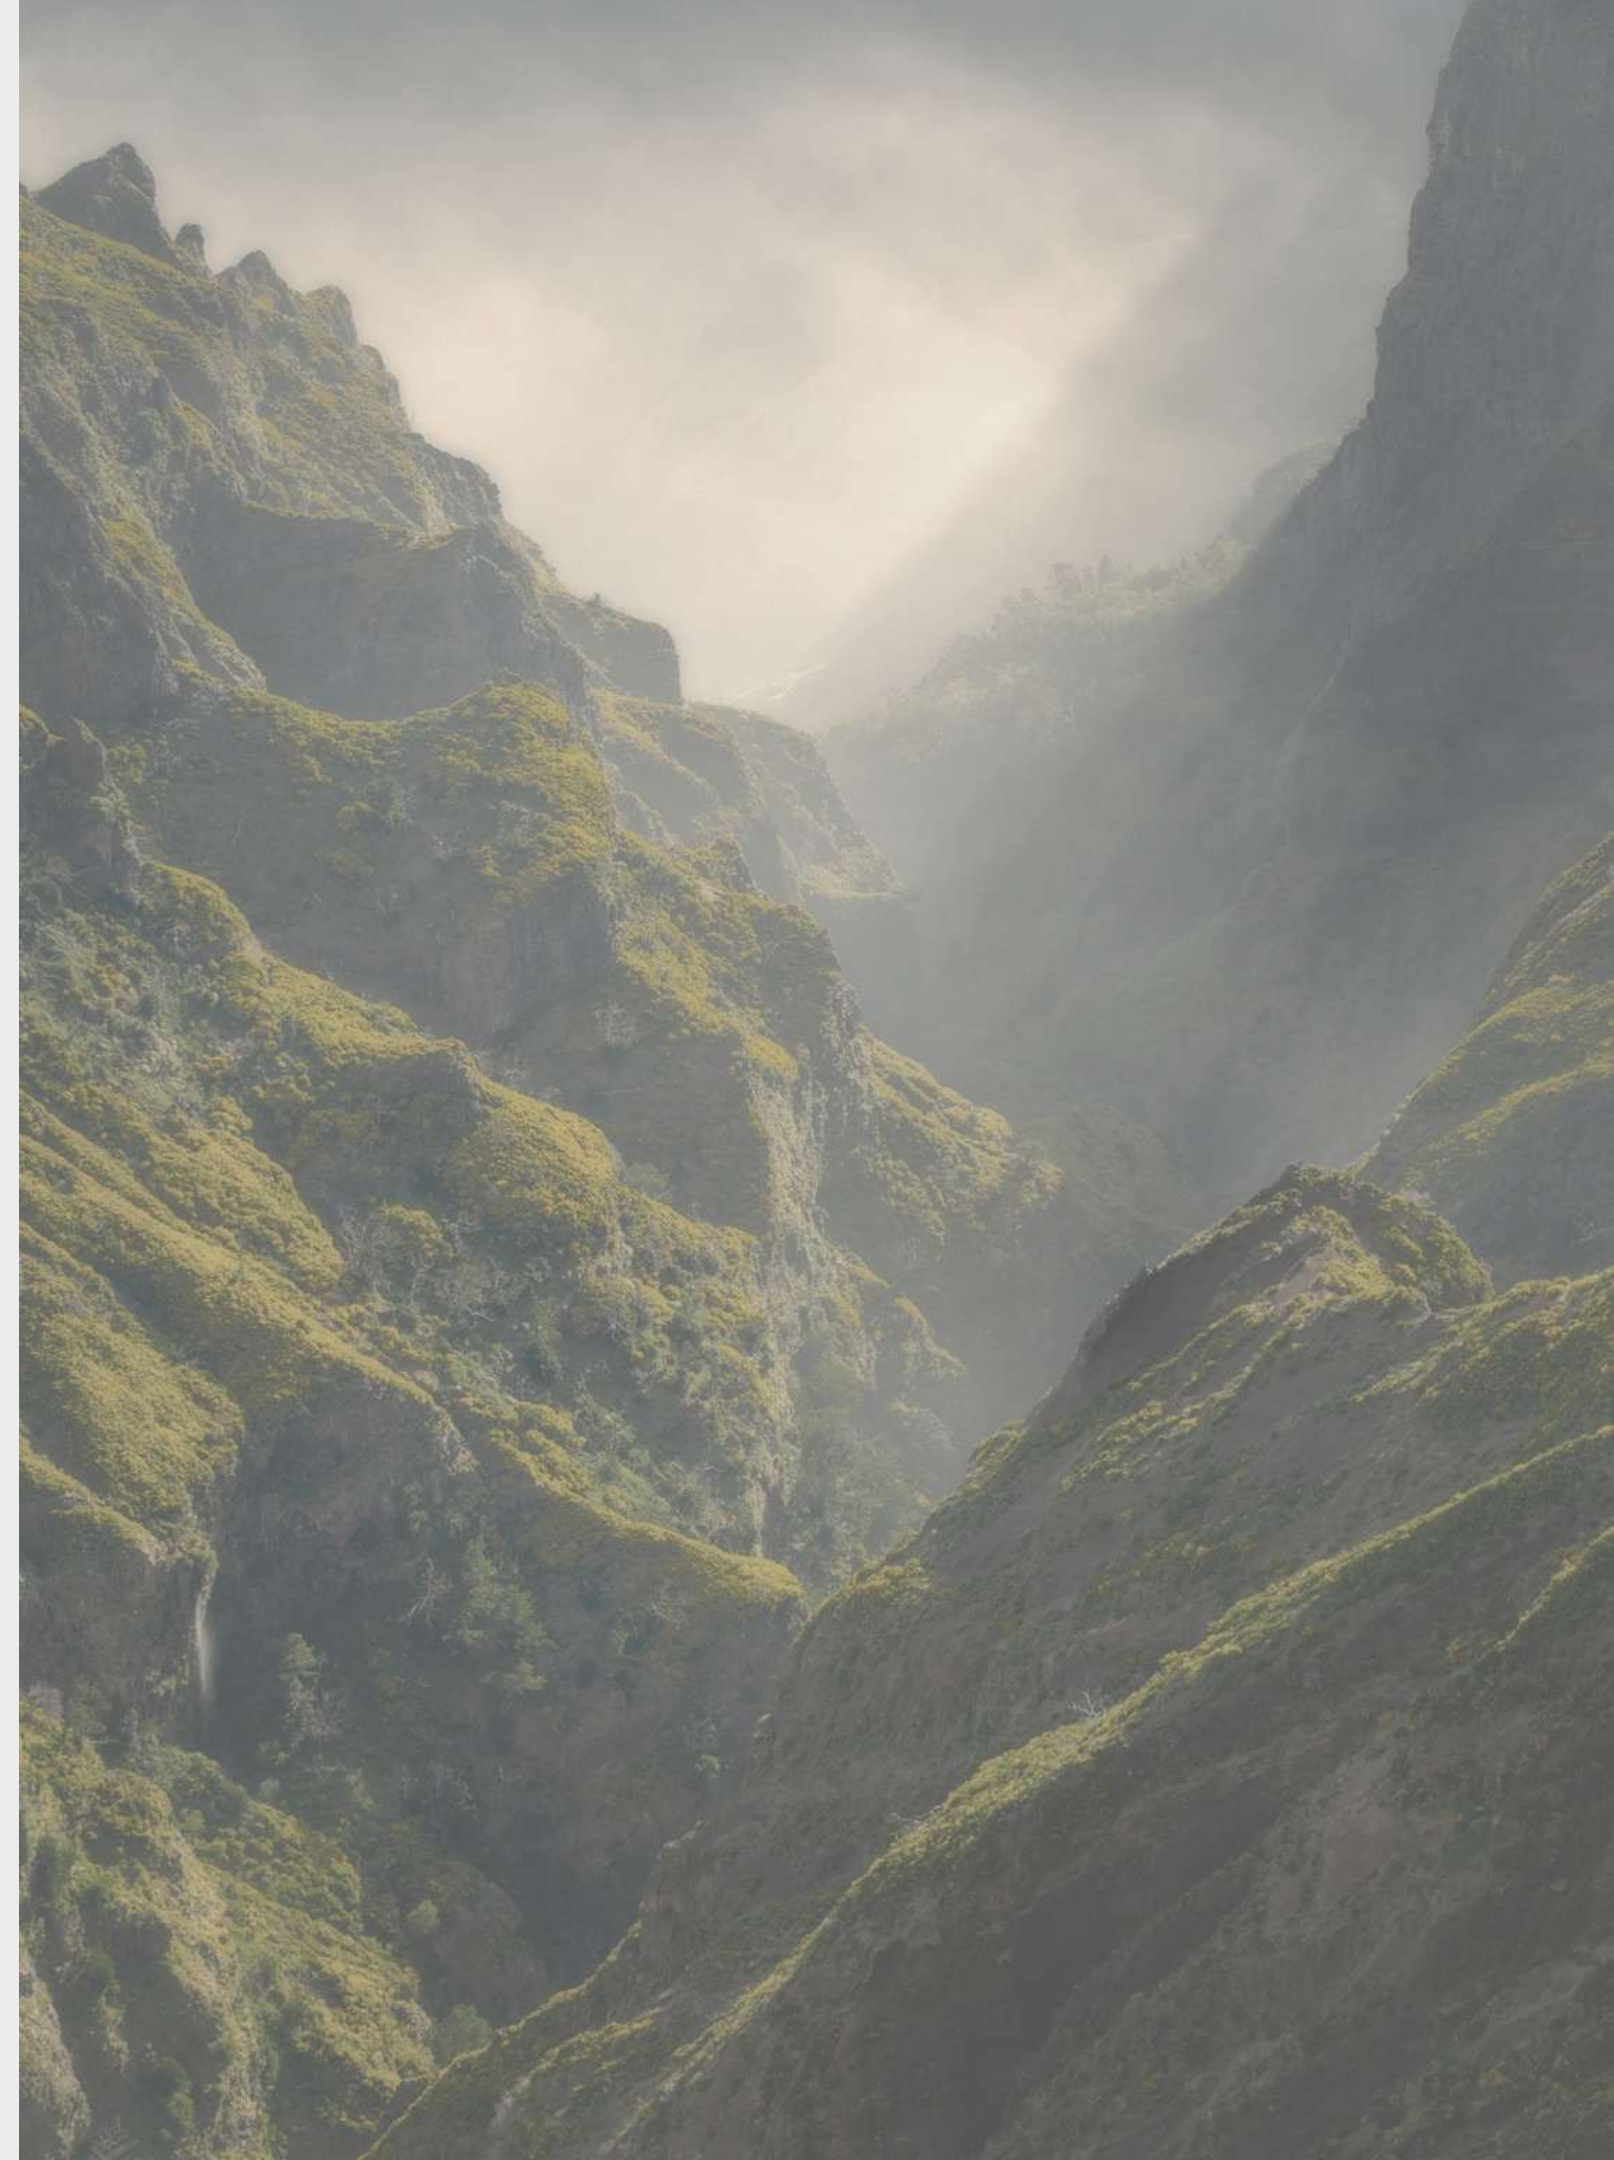

Sage Veil

Sage Veil is an attractive product featuring a base where green and gold short veins are harmoniously scattered, overlaid with intricately intertwined thin and thick veins.

A highlight of the design is the unique pattern where some of the thick veins break apart and then reconnect.

The green edge painting blends seamlessly with the short veins of the base, adding a refreshing touch throughout the entire slab.

Sage Veil

SLAB SIZE 65" × 130" (58.68 sq.ft)

THICKNESS 2CM & 3CM **FINISH** POLISHED

Sage Veil

SLAB SIZE 65" × 130" (58.68 sq.ft)
